

Annex A

Award	Most Innovative Idea
Team Name	GO WOMEN
Description	To equip female Telegram users with safety and privacy functions such as watermarking, face-blurring, and better reporting assistance whilst deterring the non-consensual circulation of their explicit photographs by their recipients.
Quote	We perceived the Hackathon as a platform to learn about the needs of women in a virtual realm, and an opportunity for us to bring fresh solutions to the ever-changing problems that women are facing in society. With our common goal to empower women with the autonomy and security that they deserve, we embarked on our journey to present practical remedies that not only protect but liberate women from all walks of life. – Liew Qian Hui

Award	Most Feasible Idea
Team Name	All Shook Up
Description	Utilising existing infrastructure to counter the rise of Image-Based Sexual Abuse (IBSA) through public education, provision of multi-disciplinary clinics for IBSA victims, and promotion of IBSA victim success stories.
Quote	The sensitive nature of the problem identified in "Hackathon for a Better World", called for a different approach, one that is person-centric and that considers the problem and possible solutions critically before devising a framework for a solution to which technology could be applied as required. As legal practitioners, we joined this hackathon as we believed our collective work experience would enable us to offer the necessary person-centric perspectives to produce a viable solution for the problem. – Jevon Louis

Award	Most Life-Changing Idea
Team Name	Voicehackers
Description	A CyberTogether Hub which fortifies legal and non-legal support to the victims through public-private partnerships and spearheads the whole-of-nation fight against cyberbullying through a one-stop platform.
Quote	As digitisation proliferates, it has also exacerbated cyberbullying in Singapore. Our team advocates equal rights for all to navigate digital spaces freely and safely. We were thus motivated to suggest a solution that leverages public-private partnerships and empowers everyone, in particular women and girls, with digital citizenship. – Tay Meng How

Award	Most Human-Centred Idea
Team Name	Pin It Down!
Description	A 3-pronged approach that empowers the loved ones of sexual offenders to share their personal journeys through social media, and a one-stop website with resources from key stakeholders and ground-up support group.
Quote	During the first Design Thinking masterclass, we were encouraged to think out of the box in approaching the problem and crafting our persona. Through lateral thinking and empathy work, we decided to put ourselves in the shoes of those who woke up one day and found out that the person they love and trust the most in this world turned out to be a sexual offender. – Intan Krishanty
