Subject: Public Consultation on Draft Personal Data Protection (PDP) Amendment Bill

Hi,

While I agree the bill will protect public in general but it put burden on smaller biz with little or no IT resources to ensure the server/system/laptop etc will not be breached or compromised in this fast moving IT world. A more functional approach is to treat company of different size differently. Ensure some basic security hygiene through online training, recommend low cost, government subsidised IT software/hardware to companies. As long as companies has deploy such recommended solution, indemnify them from any financial or commercial punishment.

Warmest regards

James Khow
